

Source: HealthTrack Medical Systems

Brisbane, 1st March, 2009 – HealthTrack is pleased to announce the release of Version 3 of our Clinical Information management and Reporting System to enhance existing features, deliver significant updates and improve user efficiencies.

Background: HealthTrack V2 was released in 2003, based on Microsoft .Net1.1 and Microsoft SQL Server. In 2003, state of the art for display monitors was 15" 1024x768 LCD monitors. HealthTrack V2 was built to support these standards. Today, however things have changed. Microsoft has withdrawn support for Microsoft .Net1.1, screen sizes have increased and software technologies have evolved. After 5 years, the current HealthTrack V2 has reached the point that it cannot support the new features we wish to include for our users.

Benefit: The new HealthTrack V3 delivers to our clients support for the latest Microsoft infrastructure - including SQL 64 and 32 bit versions across SQL 2008, 2005 and 2000 - as required by many of our hospital clients, while also delivering a number of new features including larger display support to improve data visibility and many new features the previous version could not fully support.

- *Large Screen Support:* HealthTrack V3 can now use a 1280x1024 clinical screen display.
- *Doctor Workspace:* Large screens provide the doctor with simultaneous viewing of key task areas such as 'Doctor Dashboard' and personal 'Diary' with auto-update, while providing simultaneous viewing of clinical screens. Delivering improved doctor's efficiency through increase visibility of key helpful information.
- *New Features:* HealthTrack V3 has already incorporated many new features, including:
 - Encrypted transmission of letters and results to external parties
 - User managed letter templates
 - User managed diary templates
 - New medical screen display

About HealthTrack

HealthTrack is an Australian company dedicated to designing and delivering 'best of breed' patient and clinical information management systems to the international healthcare industry. Our customers include many of the largest public and private hospitals – plus many large and small private specialty clinical practices.

Product Information

At the core of HealthTrack is a comprehensive clinical data engine. This powerful data engine is the foundation for delivering an in-depth diagnostic history and a vast arrange of research tools for a variety of specialist clinical functions. We are a one-stop source of comprehensive information and resources regarding chronic disease management, specializing in:

- Clinical Practice Management
 - Cardiology Management
 - Cardiac (non-invasive testing)
 - Cardiac (invasive procedures)
 - Cardiac EP
 - Implantable Devices (ICD, Pacemakers, etc.)
 - Paediatric Cardiology
